Office of Congressman

Greg Gianforte

1419 Longworth HOB

Washington, DC 20515 Phone: (202) 225-3211

Email Rep. Gianforte

Some pointers for your phone call:

Introduce yourself - your name, where you are from.

- 1. State why the St. Mary Project and Milk River are important to you.. (how would you be affected if the project failed and the Milk River were to dry up).
- 2. Ask them to reverse the funding ratio from the current 75/25 (irrigators/bureau Of Rec) to a 25/75 ratio.

Reminders.

- The St. Mary system (diversion & siphons) is over 100 years old, deteriorating by the day, and in need of major repairs.
- This system supplements the Milk River (which is the Life line of the Hi-line). Without it, would go dry 6 out of 10 years.
- This water:
 - o Is the primary source of water for the towns of Havre, Chinook, and Harlem
 - Provides crucial wildlife and fisheries habitat all along the river system and Bowdoin Wildlife Management Area.
 - o Benefits the 40 plus species in the river below the confluence with the Missouri and also mitigates impacts from Fort Peck Reservoir for these species.
 - o Provides irrigation water to over 110,000 acres.

- Irrigators currently shoulder 75% of the diversion's operating costs. This is unsustainable for ag producers.
- If this system fails, it could mean an estimated \$2 billion dollar impact to the Hi-Line.
